

FACILITATOR GUIDE TO PARTICIPATORY ACTIVITIES FOR

TOPIC: IMMUNISATION

How to use the Card set in a participatory way

1. **Hold and Describe:** All cards are handed out to the audience and each person comes to the front and describes what they see and guesses which disease is shown.
2. **Blocking the Route:**

Those with cards that block the transmission of each disease must come up to the front and firstly identify which diseases can be controlled by the activity shown on the card.

Secondly, give out the two cards: Death and the doctor.

Each person should stand behind one of the two cards: if the disease will result in death with no vaccine stand behind Card No. 19. or if it can be prevented by treatment stand behind the doctor.

DISCUSSION

The pros and cons of Immunisation. The message being that it is safer to have the vaccine than risk deadly disease without having any immunisation.
